# Post Primary Certification Coding

---

## Important Information

This packet contains the listing of all current X-Ray Lady courses to date that have been submitted and evaluated by the ARRT for the purpose of obtaining structured education in the below listed post-primary categories. It is the responsibility of the technologist to ensure that all requirements are met in order to establish eligibility to sit for any post-primary examination administered by the ARRT.

According to the ARRT:

*“Candidates for the post-primary certification and registration must meet clinical experience requirements before signing the application for certification and registration. The requirements call for completing and documenting specific numbers of repetitions for various procedures, which must have been completed during the 24 months immediately preceding the application date. When clinical experience requirements are updated, candidates are allowed a two-year grace period during which either the old or new requirements are acceptable.*

*Beginning January 1, 2016, candidates for post-primary certification and registration will also be required to complete 16 hours of structured education related to the content outlines for that exam. Acceptable forms of structured education include:*

- *Academic courses from an institution accredited by a mechanism recognized by the ARRT for an academic degree,*
- *CE opportunities approved by a RCEEM or RCEEM+, or*
- *A combination of the two options.*

*Candidates will need to document at least one CE credit or its equivalent of structured education in each certification and registration content category; the remaining hours may be distributed among any categories of the content outlines.”*

For more information, please visit the ARRT website by clicking [here](#) or contacting them via phone at (651) 687-0048. For the Continuing Registration department, use extension 8540. For the Clinical Experience Requirements department, use extension 8570.

## Course Designations

Below is the listing of currently approved and coded courses and the content areas each course covers.

### Bone Densitometry (BD)
